Summary

Junior CS student specializing in full-stack development (Java, SpringBoot, React, MySQL). I build things that work and ship them: from a real-time link shortener to a client-facing mobile app delivered to spec. Looking to bring that same consistency to a developer role.

Education

Iowa State University

Bachelor of Science in Computer Science

GPA: 3.3

Aug. 2023 – May. 2027

Ames, Iowa

Projects

Link Shortening Website | *SpringBoot, MySQL, Vite, JavaScript*

April 2026

- Built and deployed a full-stack URL shortener with user authentication (register/login), allowing each user to manage their own pool of shortened links via a personal dashboard.
- Implemented click tracking and analytics so users can monitor traffic on their shortened links in real time.
- Designed a MySQL schema to store users, links, and click events, and exposed the data through RESTful SpringBoot APIs consumed by a React/Vite frontend.
- Deployed to Render with a CI/CD pipeline via GitHub, keeping the live site in sync with the main branch.

Mobile Geography Guessing Game | *SpringBoot, Java, MySQL*

December 2025

- Built a full-stack mobile geography quiz app where users identify real-world locations from photos, with game logic and scoring handled entirely in Java/SpringBoot.
- Designed and implemented a MySQL database to store hundreds of location entries, user scores, and game session data.
- Developed RESTful APIs in SpringBoot to serve photo prompts and process user guesses, then connected them to an Android frontend for a seamless end-to-end experience.

Freelance PC Builder and Hardware Technician | *Mac, Windows, Linux, Custom PCs*

January 2018 – Current

- Built computers for over 10 friends and family members, assembling to spec.
- Diagnosed and resolved hardware and software issues including failed drives, memory errors, and OS corruption, both in person and remotely.

Volunteer

CHEER

Math and Science Tutor

January 2020 – January 2021

Hong Kong

- Taught 10 students concepts ranging from simple arithmetic to algebra.
- Assembled lesson plans based on students in class performance and future topics.
- Kept records of academic performance and applied this information to address areas of improvement for students.

Coursework

Classes: Data Structures and Algorithms, Advanced Algorithms, Operating Systems, Software Testing

Clubs: Computer Science and Software Engineering (CSE), Hacking and Cybersecurity Club (Hacc)

Technical Skills

Languages: Python, JavaScript, Java, MySQL

Developer Tools: Bash, Git

Technologies/Frameworks: React, SpringBoot
