Student in Ames, Iowa

Education & Certificates

- B.S. in Computer Science from Iowa State University Expected May 2027

Projects

Group Finance Tracker (Divvy)

- Developed a secure full-stack group finance tracker using Java, SpringBoot, Maven, and PostgreSQL to help groups easily and accurately track who owes who money.
- Designed REST APIs using Hibernate to help the frontend securely retrieve data from the backend.
- Utilized Docker to containerize the backend and database and deploy on my self hosted homelab.

Redis-like Cache Database

- Built a portable version of Redis using Go that helps manage an in-memory database by implementing a custom RESP parser.
- Leveraged Linux and Git for version control and environment handling and testing.
- Implemented concurrency via goroutines, channels, and mutexes to prevent race conditions.

Android Geography Game (GeoHunt)

- Collaborated in a team to build an interactive geography game using Java, Spring Boot, MySQL, and REST API .
- Worked in a Sprint format using the Agile methodology consisting of weekly code reviews by a supervisor, which worked to improve the speed and functionality of the game.
- Used a CI/CD pipeline to run the backend of the game on a Linux server and do automated tests to make sure no new code broke old, existing functionality.
