EDUCATION

Iowa State University

August 2023 – May 2027

Bachelor of Science (B.S.) in Computer Science, In Progress

Ames, Iowa

- GPA: 3.3
- Relevant Coursework: Data Structures and Algorithms, Advanced Algorithms, Operating Systems, Software Testing
- Clubs: Computer Science and Software Engineering (CSE), Hacking and Cybersecurity Club (HACC)

EXPERIENCE

Computer Vision Engineer Intern | Cresento.HK — Remote

June 2026 – Present

- Fine-tuned and evaluated computer vision models for sports performance analysis, handling complex variables including variable camera angles and player visibility across match footage.
- Curated and validated football match datasets through annotation, classification, and error analysis to maintain strict quality standards.
- Built an end-to-end API pipeline to ingest full-length match footage and automatically extract event data and statistical analytics.

Campus Moving and Repair Team | Iowa Home Consulting

May 2026 – Present

- Managed high-volume furniture setup, repair, and distribution across university housing on a full-time schedule (40 hrs/week), consistently meeting strict daily deadlines.
- Inspected and refurbished student housing assets to ensure compliance with university standards using hand and power tools.

Student Dining Worker | ISU Dining

August 2023 – December 2023

- Managed orders for 100+ customers daily in a fast-paced environment, ensuring 100% accuracy.
- Coordinated with kitchen and front-of-house staff to ensure efficient service.

PROJECTS

GitHub Portfolio Generator | FastAPI, PostgreSQL, GitHub OAuth

June 2026

- Built a shareable developer profile platform at getfolio.page where users authenticate via GitHub OAuth and receive a scored, ranked portfolio page generated from their public repositories.
- Designed a repo scoring algorithm in Python to rank repositories by activity, stars, and language diversity, surfacing a developer's best work automatically.
- Implemented GitHub OAuth 2.0 and JWT authentication, persisting user customizations to PostgreSQL via SQLAlchemy.
- Deployed full-stack across Vercel (React/Vite frontend) and Render (FastAPI backend) with environment-based config for dev and production.

Linkit | SpringBoot, PostgreSQL

April 2026

- Built and deployed a full-stack URL shortener with user authentication, a personal dashboard, and click analytics.
- Secured private endpoints with stateless JWT authentication, validating tokens via a Spring Security filter chain.
- Designed a PostgreSQL schema and exposed data through RESTful SpringBoot APIs consumed by a React/Vite frontend.

ExpenseTracker | Java, Spring Boot, React, PostgreSQL, AWS, JWT, WebSockets

In Progress

- Building a full-stack expense tracking application with JWT-based authentication and real-time updates via WebSockets.
- Designing [specific algorithm feature – fill in] and integrating an AI-powered feature for [fill in].

- Deploying on AWS toward a live, demoable URL as part of AWS Solutions Architect Associate (SAA-C03) hands-on study.

CollabTree | *Go, PostgreSQL, Github OAuth*

In Progress

- Building the backend for a Tinder-style collaborator-matching platform connecting students on projects.
- Implemented user management (model, repository, service, handler layers) with clean separation of concerns using the pgx driver.
- Refactoring toward interface-based repositories for testability; GitHub OAuth integration in progress.

Mobile Geography Guessing Game | *SpringBoot, Java, MySQL, Android Studio*

December 2025

- Built a full-stack mobile geography quiz app where users identify real-world locations from photos, with game logic and scoring handled in Java/SpringBoot.
- Developed collaboratively using Agile methodology, completing iterative sprints with regular client reviews to deliver all acceptance criteria on schedule.

TECHNICAL SKILLS

Languages and Databases: Go, Java, Python, PostgreSQL, MySQL

Frameworks: SpringBoot, React, FastAPI

Tools and DevOps: Git, AWS, Docker, Kubernetes (k3s), Tailscale, Android Studio, Postman, GitHub Actions, Render, Vercel
